Hiring Manager

May 22, 2026

YOUR COMPANY

Re: Application — Graphics Engineer

Dear Hiring Manager,

Game development at the level you are hiring for blends engineering and craft: shipping visuals players remember while iterating in a proprietary engine alongside artists and effects specialists. That intersection is where I want to contribute. I am applying for the Graphics Engineer role at your company to help elevate rendering quality, prototype effects, and support content teams with reliable tools and clear technical communication.

My deepest graphics foundation comes from imaging and GPU work. At Algolux I built C++/CUDA/OpenCV tooling for camera and ISP validation, outdoor capture rigs, and Python RAW processing—work that produced an approximately 12,000-image validation dataset and shortened manual validation loops. Linear algebra, image statistics, and disciplined software practice taught me to treat rendering problems as measured systems, not guesses.

Alongside broader industry experience in backend, cloud, and security-focused delivery, I am completing a Master of Engineering in Information Technology at École de technologie supérieure (ÉTS) with a project in C++, OpenGL, and Blender: real-time surface wear simulation in texture space, combining GPU-oriented simulation with interactive rendering and asset-oriented iteration. Teaching assistantships at ÉTS and Polytechnique Montréal (including DevSecOps, LOG 8100) sharpened how I document expectations, give constructive feedback, and unblock cross-disciplinary teams under deadlines—skills that transfer directly to partnering with environment, character, and VFX artists.

I am drawn to how this role pairs research and prototyping on advanced real-time effects with hands-on support for environment, character, and VFX workflows inside a proprietary engine.

I value workplaces that emphasize curiosity and collaboration over matching every requirement perfectly on day one; that matches how I work. I would welcome a conversation about contributing to your graphics team and learning from senior engineers on core engine systems. My curriculum vitae adds context; further detail is at antoineboucher.info.

Sincerely,

Antoine Boucher
